BETSY SOFA

PRODUCT DATA SPECIFICATION

Betsy has been designed as a contemporary tub lounge chair collection with sweeping curves and a selection of stylish frames. The sofa options add another dimension to the range, providing matched two seat models.

Materials

The seat and back shells for the Betsy sofa are produced from laminated Birch plywood. These are inserted with Clinched 'T' nuts, providing strong, metal to metal fixings when assembled together using mild steel bracketry and metric machine bolts.

These components are covered in a selection of V28 to V33 CMHR (Combustion Modified High Resilience) flexible Polyurethane foams complying with 'Crib 5' flammability requirements.

Upholstery fabrics for the seat and back are available in a wide selection of patterns, colours, weaves and composite materials. It is recommended that specifiers visit the manufactures' websites for comprehensive performance details on individual fabrics.

Betsy sofas are offered with a choice of two types of frame. One is produced in 16mm diameter solid steel rod which are connected with 3mm thick cold rolled steel plates and finished with an epoxy powder coating. The alternative frame is produced in solid Beech wood that is manufactured from various sections that are mortised and tenon jointed, glued and stapled together, then finished with a durable lacquer finish.

Considerations

- Choice of two base styles
- Smooth upholstery detailing to promote longevity of use and reduce wear.
- Two-tone upholstery available.
- Seats two users comfortably
- Suites with Betsy arm chair range
