CARE AND MAINTENANCE INSTRUCTIONS

GRESHAM

CLEANING GUIDE FOR FABRICS

Regular care and maintenance is needed for the fabrics to continue to look good, perform well and protect for longer.

Do:

- Vacuum regularly to remove crumbs, dust and dirt.
- Soak up spills as quickly as possible, using a dry absorbent cloth.
- Clean persistent stains with a damp cloth or use upholstery shampoo.
- Bleach clean using a 10% bleach solution when disinfection is necessary.

Don't:

- Leave soap or cleaning fluid residues on the fabric surface.
- Fully immerse or 'wet out' the fabric.
- Use a solvent based cleaner.
- Steam clean the fabric.
- Any of these actions could inhibit the stain repellent capability of the TriOnyx treatment.

Be aware, be realistic:

- The anti-microbial and flame retardant properties are permanent and not affected by cleaning.
- The finish is completely waterproof because of a protective film between the fabric and the backing.
- The stain repellent element promotes a beading action of liquid spills on the fabric surface, giving extra time to tackle the spillage. If left unattended, the fabric will eventually 'wet out' as far as the waterproof PU film. Ultimately, the quicker stains and spills are dealt with, the easier they can be successfully removed.
- The Camira TriOnyx finish provides excellent protection for fabrics, but it doesn't create a full 'wipe down' upholstery solution like vinyl.
- Stain repellent treatments like ScotchGard™ are available on certain fabrics that we offer. For further information please contact our sales team on: 01204 664422.
